       /note="Organ: brain; Vector: pCMVSPORT 6; 1st strand cDNA was primed with a NotI-oligo(dT) primer. Five prime end enriched, double-stranded cDNA was digested with Not I and cloned into the Not I and Eco RV sites of the pCMVSPORT 6 vector. Library is not normalized, but is the control for the normalized libraries. Library was constructed by Life morphological primers.

JONES M.L., Shanley T.P., Ward P.A.;
SUBMITTED (FEB-1994) to the EMBL/GenBank/DDBJ databases.
-I- FUNCTION: CHEWOATTRACTANT FOR BLOOD MONOCYTES, MEMORY T
CELLS AND EOSINOPHILS. CAUSES THE RELEASE OF HISTAMINE F
BASOPHILS AND ACTIVATES EOSINOPHILS (BY SIMILARITY).
-I- SUBCELLULAR LOCATION: Secreted.
-I- SIMILARITY: BELONGS TO THE INTERCRINE BETA FAMILY (SMALL
C-C) (CHEMOKINE CC).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This SWISS-PROT entry is copyright.                                                                                                                                                                                                                                                                                                                                                                          OF TRANSCRIPTION. IN THE PRESENCE OF THE DELTA SUBUNIT, RNAP DISPLAYS AN INCREASED SPECIFICITY OF TRANSCRIPTION, A DECREASED AFFINITY FOR NUCLEIC ACIDS, AND AN INCREASED EFFICIENCY OF RNA SYNTHESIS BECAUSE OF ENHANCED RECYCLING (BY SIMILARITY).

SUBUNIT: RNAP IS COMPOSED OF A CORE OF 2 ALPHA, A BETA AND A BETA SUBUNITS. THE CORE IS ASSOCIATED WITH A DELTA SUBUNITS AND ONE OF SEVERAL SIGMA FACTORS (BY SIMILARITY).

SIMILARITY: BELONGS TO THE RPOE FAMILY.

-ir function: part of an arp-dependent transport system responsible for the release of Lipoproteins targeted to the Outer membrane from the inner membrane. Such a release is dependent of the Sorting-Signal (absence of an Asp at Position 2 of the Mature Lipoprotein) and of Lola (by Similarity).

-i- SUBCELLULAR LOCATION: Inner membrane-associated (by similarity)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        MEDLINE=20406833; PubMed=10952301; Heidelberg J.F., Eisen J.A., Nelson W.C.,
